Good afternoon [REDACTED]

Hope you are keeping well.

Thank you for consulting the MOD on the above lighting proposal for the Glentarken Development (Formerly known as Drummond ECU00004700).

Within the lighting proposal it is identified that there is a reduction of turbines from 14 to 12 since the scoping opinion.

I have completed an assessment of the lighting proposal with MOD Low Flying SME and can confirm that the proposed lighting meets MOD requirements is deemed acceptable (IR Lighting on all turbines).

The MOD has not updated ECU and look forward to being consulted on the S36 application when submitted.

Kindest regards
